06.18.2013

## Intro

Today I began to implement the Visual Object Panel of the Attic Framework Application.

## Attic Visualization Framework

The upper panel is designed to be visual object selection panel (Figure ). The visual objects are listed as icons in the panel. User can drag a visual object(i.e. the icon) into the canvas to create an instance of the object. Now the icon has been finished, however the drag-and-drop effect becomes a problem for currently I have not found a way to implement the dragging effect from the panel to the Canvas.

Figure 1: Visual Object Panel.

## Plan for Tomorrow

- Continue to deal with the drag-and-drop effect;
- prepare presentation slides for review discuss in tomorrow's seminar and CAD&CG Annual Academic Conference.
